

**YOUR SPECIALIST TRADE PARTNER FOR
WASTE BIN, ASHTRAY,
FIRE PROTECTION PRODUCTS AND HYGIENE PRODUCT**

Your specialist trade partner for waste bins, ashtrays, fire protection products and Hygiene products

Our customers are the focus of our joint activities. TKG mainly supplies the specialized trade and the hardware store. To them we commit ourselves with Professional competence, flexibility and enthusiasm to meet the demands placed on us. Reliability and credibility in all statements are our claim.

Our products, most of which are manufactured in Germany, offer an excellent Quality that meets the highest standards. We look after you personally and individually. We want to offer you solutions. We offer the advantages of a retailer: fast availability of goods, a wide assortment and good sources of supply. We offer advantages of a manufacturer:

Due to our manufacturing experience in the metal industry we are fit for problem solutions and construct parts according to samples or drawings for you. We also offer individual solutions. Are you interested in individualised ashtrays or customised wastebaskets with company logo? No problem. We are innovative : Every year we bring new solutions to the market and develop new products together with our partners.

We hope you enjoy the current TKG product overview,

Your TKG Team

WASTE BIN FOR INSIDE SENSOR BIN

Sensor waste bin is a neat thing: The extra-large bin allows for hygienic waste disposal- without contact! The sensor cover reacts to movement and opens automatically.

The extra-large waste bin made of stainless steel combines high comfort with a luxurious look. The classically simple design makes the bin to gloosy eye-catcher in your kitchen or office. The stainless steel material is durable and insensitive to scratches and dirt. So your bin still looks great even after pro-longed use.

With modern sensor technology: The stable waste bin has a control panel, which allows you to open and close the lid automatically by pressing a button. Of course, you can also simply switch off the sensor technology and open the lid manually.

Application:
indoor areas

Ideal for:
offices, sanitary rooms, public facilities

FIRE PROTECTION

FIRE EXTINGUISHERS

The classical sector of our medium-sized family business since 1967 has been the production of fire extinguisher cylinders. We have recently expanded and offer complete fire extinguishers. Whether foam extinguishers, powder extinguishers, CO2 extinguishers, or Fat fire extinguishers: charge extinguishers or permanent pressure extinguishers: TKG is an expert for commercial operating and building equipment requirements.

Types of Fire Extinguishers

Foam Extinguishers: Foam extinguishers are primarily water based and contain a foaming agent, foam extinguishers have a cooling effect on the fuel. On burning liquids, the foaming agent creates a barrier between the flame and the fuel, extinguishing the fire.

Powder Extinguishers: Standard dry powder extinguishers are also called ABC extinguishers because they can be used on fire types A, B, C or D.

Carbon dioxide (CO2) Extinguishers: Carbon dioxide extinguishers work by suffocating the fire. Carbon dioxide displaces oxygen in the air. However, once discharged, the CO2 will dissipate quickly and allow access for oxygen again, which can re-ignite the fire.

Fat fire Extinguishers : Fat fire extinguishers a special extinguishing agent is used which extinguishes the burning liquid by saponification and forms a barrier layer over the oil or fat. This prevents the absorption of oxygen, cools the burning liquid below the self-ignition temperature and prevents the fire from flaring up again.

The differences between Cartridge operated type and Stored pressure type

Stored pressure type, the expellant is stored in the same chamber as the firefighting agent itself. Depending on the agent used, different propellants are used. With dry chemical extinguishers, nitrogen is typically used; water and foam extinguishers typically use air. Stored pressure fire extinguishers are the most common type in the world.

Cartridge-operated extinguishers or auxillary pressure type, contain the expellant gas in a separate cartridge that is punctured prior to discharge, exposing the propellant to the extinguishing agent. This type is the most common one in Germany, used primarily in areas such as industrial facilities, where they receive higher-than-average use. They have the advantage of simple and prompt recharge, allowing an operator to discharge the extinguisher, recharge it, and return to the fire in a reasonable amount of time. This sort of extinguisher is easier to disassemble when doing maintenance, than stored pressure extinguishers.

CARTRIDGE PRESSURE FOAM EXTINGUISHER

Foam extinguishers 6 kg or 9 kg which suppress fires of for fire classes A, B.
Foam fire extinguishers are one of the most common types of fire extinguisher, and are generally used, suitable solution for public facilities and areas with high public traffic. Lowest risks for people compared to other extinguishing agents.

Available in 6 and 9 liter versions. and the 6-liter version is also available with F-rating.

Application:
indoor areas

Ideal for:
public institutions and areas with high traffic, kitchens, administrative buildings

WALL MOUNT

CARTRIDGE PRESSURE POWDER EXTINGUISHERS

Cartridge pressure powder extinguishers are qualitative extinguishing agents for fire classes A, B, C and can be used variably. Work on most types of fire; they suppress fires very quickly.

The powder can spread over a large area leaving a residue; can obscure vision when discharged and can be inhaled if used in enclosed areas.

Available in 6 and 9 kg version (incl. wall mount).

Application :
indoor and outdoor areas

Ideal for :
office buildings, shops, warehouses, car parks,
underground car parks, boiler rooms

STORED PRESSURE POWDER EXTINGUISHER

CARBON DIOXIDE (CO2) EXTINGUISHER

Active fire protection device that works by expelling carbon dioxide onto a fire. It works by displacing the oxygen the fire relies upon to continue burning, and it is primarily used to extinguish fires in which the source of the fuel is a flammable liquid or gas.

Carbon dioxide fire extinguishers are a very common form of fire extinguisher and are used in situations where traditional water and foam fire extinguishers or dry chemical fire extinguishers are not suitable. A carbon dioxide fire extinguisher is a “clean extinguisher” and leaves no residue on the area it is applied so it is suitable for use in fires in areas where special hygienic requirements apply.

Application:
indoor areas

Ideal for:
IT systems in offices, server rooms or switch cabinets, practices, laboratories and in the field of radiological practices

FIRE EXTINGUISHER BOX

Fire extinguisher boxes for the safet storage of almost every fire extinguishers.

Made of plastic (PP), the upper part coated in red, the lower part coated in black including a stable fastening ring (PVC retaining strap).

Quick release fasteners, sealable, suitable for tank Ø 150 to 190 mm, depending on the model. With inspection window.

Temperature resistant from - 40 °C to + 80 °C.

Also available as Stable, transparent cover for weather-, dust- and dirt protection and for the prevention of vandalism and improper handling. Predrilled, gray base for quick and easy installation. With unique panic lock for quick opening and a metal holder for the fire extinguisher.

Application:
indoor and outdoor areas

Ideal for:
hotels, resorts, shopping malls, airports, hospitals, trucks, vans, service stations, workshops

FIRE EXTINGUISHER PICTOGRAM

The signs „Fire extinguisher F001“ or „Fire hose F002“ indicate the locations of the fire extinguishers or fire hoses in workplaces and public areas. It must be attached directly above the fire extinguisher or extinguishing hose to indicates the fire protection device in an emergency case.

The international fire protection symbol fire extinguisher or extinguishing hose thus facilitates the search for the equipment in an emergency. In principle, a photoluminescent sign must be placed above every fire extinguisher or extinguishing hose, which also glows in the dark.

You can buy the pictogram from us in aluminium, plastic or self-adhesive foil in the photoluminescent version.

Application:
indoor areas

Ideal for:
hotels, holiday resorts, shopping centres, airports, hospitals, schools, public buildings and facilities

FIRE BLANKET CONTAINER

Fire blanket container made of phosphated sheet steel powder-coated in red colour or Plastic (PVC) in red colour.

The fire blanket container made of sheet steel has a metal rotary handle lock, the plastic container must simply be folded up.

Suitable for fire blanket according to EN 1869 made of thermo glass fabric 400 g /m². The fire blanket is provided mainly for extinguishing grease fires, special oil fires and small incipient fires (e.g. table candles). With 2 coloured, detached manual operation cases.

Application:
indoor areas

Ideal for:
commercial enterprises, industrial enterprises, public institutions

Fire extinguishers must in any case be maintained and made ready for use again after no more than two years after the fire has been started or after being accidentally operated.

For commercial use, regular maintenance after two years from latest used, even when not in use, is prescribed in accordance with DIN 14406!

CORONAVIRUS COVID-19

- There are a variety of diseases
- Virus occur in many different forms
- They are pathogens and cause infections in human
- Many people around the world infected by Covid-19

It is important to protect ourselves from the risk of Covid-19

Are you looking for a solution to help prevent the spread of viruses, influenza, bacteria and Covid-19?

Please take a look on our new hygiene products that we have developed together with our partners!

Preventing the spread of infectious diseases with our hygiene products.

If you have any questions, any unclear or inquiry, please do not hesitate to contact us.

**Protect yourself,
your staff and
your customers!**

HYGIENE STATION

The mobile hygiene station made of robust steel sheet powder-coated in black, with castors. The hygiene station can be set up near shopping trolleys, for instance.

We offer individual solutions for different customer requirements and industries. Whether you want to order the hygiene station with disinfectant dispenser and paper dispenser or as a work station with waste bin and glove dispenser, we supply you with the complete solution. The column stand is provided to you individually.

Application:
indoor and outdoor

Ideal for:
shopping markets, workshops, hospitals and other public and sanitation facilities

Accessories must be ordered separately	412003, 412004, 412006, 412028, 412015 + 412030 or 412031

Description:
The hygiene stand made of stainless steel (incl. fixing material for mounting disinfectant dispenser and soap). Stainless steel stand is perfect to place near entranceways and elevators. Portable so you can move it to wherever it is needed. High quality, durable and stable.

Application:
Indoor and outdoor

Ideal for :
clinics, offices, workshops, factory halls, schools, shopping centres, retirement homes, public areas with high traffic

WOODEN STAND

Technical Information

Version	Wooden Stand
Weight	8,0 kg
Dimensions Stand	1200 x 300 x 300 mm
- Height	1200 mm
- Width	300 mm
- Depth	300 mm
Size Wooden Set (412011 + 412015)	1200 x 300 x 300 mm
- Height	1200 mm
- Width	300 mm
- Depth	300 mm
Product Name	Item No.
Wooden stand	412011
Wooden Set	412029
Accessories must be ordered separately	412003, 412004, 412006, 412028, 412015 + 412030 or 412031

Description:
The universal stand is perceived as sustainable and Eco-friendly as wood is biodegradable, natural looks and light weight. It is also more hygienic because bacteria can survive on wood surface shorter than on metal or plastic . Wall mounting is not necessary because it is freestanding design, stable and non spillable. The wooden stand offers a flexible and variable mounting of disinfectant dispensers.

Application:
indoor

Ideal for:
clinics, offices, workshops, factory halls, schools, shopping centres, retirement homes, public areas with high traffic

FURTHER INFORMATION

Surface finishing

Products for outdoor use must meet the highest quality standards. They must be particularly resistant to charges of all kinds and provide constructive solutions for corrosion protection. Therefore, we use the surface finishing processes Hot dip galvanizing and powder coating.

Hot-dip galvanizing and electrogalvanizing

Hot-dip galvanizing is a technical process for applying zinc coating on iron and steel surface to protect against corrosion. The devices to be coated are dipped at around 465°C in melted zinc:

The zinc coating firstly protects the base metal by acting as an impervious shield between the metal and the atmosphere. Electrogalvanizing offers less protection. Electrochemical process is used to add zinc is recy:

Zinc

A non-ferrous metal which as a versalite material, zinc is mostly used as an anti-corrosive agent in other metal products. It is used in the process of galvanization. Galvanization is the coating of other metals with iron or steel, which zinc is used in and zinc is recycleable.

Powder Coating

The solvent free alternative for functional and decorative surfaces. The other advantages of this process are the high decorative and functional quality of the coatings and the almost complete utilization of the coating material. This is an environmentally friendly process.

Stainless steel

Stainless steel (according to EN 10020) is a designation for alloyed or unalloyed steels with a special degree of purity. Our stainless steel products are made of V2A stainless steel as standard.

SYMBOL

	Suitable for outdoor use
	Plastic inner bin enclosed
